

**Project Design Phase Solution
Architecture**

Date	19 June 2025
Team ID	LTVIP2025TMID50706
Project Name	Cosmetic Insights – Navigating Cosmetics Trends and Consumer Insights with Tabledu
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

KEY ASPECTS OF YOUR SOLUTION ARCHITECTURE

1. User Layer (Entry Point)

- Users include:
 - Cosmetic consumers: use filters to discover products
 - Marketers: analyze trends and user behavior
- Interacts via a simple, responsive web interface with embedded Tabledu dashboard

2. User Interface (Frontend) ○ Technologies: HTML, CSS, Bootstrap, JavaScript

- Features:
 - Filters: skin type, budget, brand, rating
 - Search and comparison interface
 - Embedded Tabledu dashboards for data visuals

3. Application Layer (Backend) ○ Technologies: Python (Flask/Streamlit) or

- JavaScript (Node.js)
- Functions:
 - Process user inputs (filters) to Tabledu

Handle login/auth (if used)

Process and fetch data from review/product databases
Optional: route feedback submission

4. Visualization Layer (Dashboard)

- Tool: Tableau Public or Tableau Server
- Displays:

- Top trending cosmetic products

- Charts by skin type, rating, region, category

- Comparison visuals for price, review score, ingredients

5. Data Sources

- Sources:

- Product Data: CSV / MySQL / Google Sheets

- Review Data: Customer ratings & feedback
- Features:

- Structured datasets allow filtering and highlighting
Can be updated regularly or live connected

6. Feedback Engine (Optional)

- Collects product ratings/reviews from users
- Stores in review repository
- Feeds into Tableau to update user satisfaction visuals

7. Hosting & Storage

- Tableau Public: for hosting dashboards
- GitHub Pages / Heroku: for web app or frontend
- Google Drive / Firebase: for storing files and datasets

8. Data Flow

- User → UI → Backend → Tableau → Visualization

- Optionally, Feedback → Stored → Updates Dashboard

9. Scalability

- Add more product datasets
- Support multi-category expansion: skincare, makeup, fragrance
- Add AI/ML trend prediction module in future

10. Security (Optional/Advanced)

- OAuth for secure login (Google, LinkedIn)
- Backend validation for user inputs and review authenticity
